AR / VR Industry and Education

Augmented and Virtual Reality has the power to transform our education systems while helping a new generation of students to learn more effectively. Interactive lessons with students involved in the learning process can improve teamwork skills with students feeling engaged, motivated and challenged creating a win-win situation in the classroom.

Studies show that creating an immersive and effective learning experience using AR/VR Reality teaching promotes faster learning, better retention and improved decision making in our students.

Bringing the world into your classroom is as simple as downloading an App onto a mobile device or chrome OS and adding a cardboard or daydream viewer or a selfie stick. Hundreds of different scenarios can be accessed by using an App. Classroom kits are also available for purchase. Visit www.edu.google.com or www.edtechteam.com for more information.
